

AI in ISSM Journals

Policy do's and don'ts

The ISSM policy covers AI use in manuscript preparation and peer review for JSM, SMR, and SMOA. It keeps responsibility with human authors and reviewers, requires disclosure of substantive AI use, and protects the integrity and confidentiality of scholarly work.

DO

Stay accountable

Authors and reviewers remain responsible for accuracy, originality, and integrity.

Disclose substantive AI use

Authors should identify the tool and its purpose in the required manuscript statement.

Verify AI output

Check references, data, text, and visuals independently before submission.

Protect confidentiality

Keep manuscript and review material within permitted, secured systems.

DON'T

Credit AI as an author

AI cannot assume responsibility for a publication.

Fabricate or manipulate

Never use AI to falsify data, results, or scientific findings.

Use public AI for peer review

Do not enter any part of a manuscript, abstract, or review into a public AI tool.

Replace expert judgment

AI must not conduct the reviewer's independent scholarly evaluation.
